KEYENCE

Sunway Square Corporate Tower 2, Jalan Lagoon Selatan, Bandar Sunway

Dear Hiring Manager,

I am writing to express my interest in an internship position at Keyence Corporation, particularly in automation and sensor-based systems. I am currently pursuing a Bachelor of Engineering Technology (Automation and Robotics) at UniKL Malaysia France Institute, with hands-on experience in embedded systems, sensor integration, and industrial automation.

During my internship at TXMR Sdn Bhd, I contributed to the installation and commissioning of a robotic arm welding system, where I was involved in system calibration, electrical wiring, and on-site testing. I also supported troubleshooting of sensors and actuators, improving system reliability and reducing operational instability during commissioning.

In addition, I have developed several engineering projects involving sensor-based control systems. This includes a Mecanum-wheel mobile robot utilizing IMU-based feedback for slope navigation, as well as a combat robot where I performed structural simulation and impact analysis to enhance durability. These projects required integrating mechanical design, embedded control, and sensor feedback to solve real-world engineering challenges.

Alongside my academic work, I am currently working part-time as a Mechanical Design and Procurement Assistant at FICES Technology, where I design prototypes, select technical components, and support fabrication processes for IoT-based systems. This role has provided me with hands-on exposure to full product development cycles, from design and component selection to fabrication and implementation.

I am particularly interested in Keyence's advanced sensor technologies and their application in high-precision sensing, measurement systems, and industrial automation. I would welcome the opportunity to contribute to your team and further develop my technical skills.

Warmest regards,

Husin Bin Hamdan
